

# Superb environmental capabilities

Every product that leaves the **KRONO** factory must exhibit both excellent price/performance and superb environmental compatibility. This starts with the exclusive use of legal certified raw material from sustainable forests, continues with rigorously monitored production, and is also endured during the utilisation and all the way through to the disposal of our products.

**Kronoclik** laminate flooring predominantly consists of renewable raw materials, the wood from sustainable forests. The design layer is reproduced, by taking a photo of the real timber, using sophisticated technology. Wood decors are reproduced to look like the original timber and give you that true-to-life wood look and feel without having to exploit the planet's natural forests.

**Kronoclik** planks don't contain any plasticisers (phthalates) or Diethylhexyl phthalate (DEHP) and a completely sealed non-porous surface does not allow the breeding of dust mites or micro-organisms, all these superb qualities make Kronoclik the best choice.

At the end of the product life-cycle, **Kronoclik** laminate flooring is totally bio-degradable (remove -can be problematically disposed of) or burnt as fuels. **Kronoclik** uses the scrap resulting from production of laminate flooring as fuel.

Quality floors made in Germany.
